

**Abstract:**

A self-inking hand stamp (1) comprising a stamp housing (2) in which a stamp character (5)-carrying stamp unit (6) is arranged with a turning mechanism (7), which stamp unit is movable, by means of an actuating bow displaceably mounted on the stamp housing (2), from an inking position, in which the stamp characters abut on an ink pad (13) arranged within the stamp, into an imprint position. Within the actuating bow (3), a receiving compartment (17) for storing at least one further ink pad (18) is provided.
